

Every slide here was gated by the rule it describes

53 archetypes, each naming the artifact that must exist on the slide
and the near-misses that do not count.

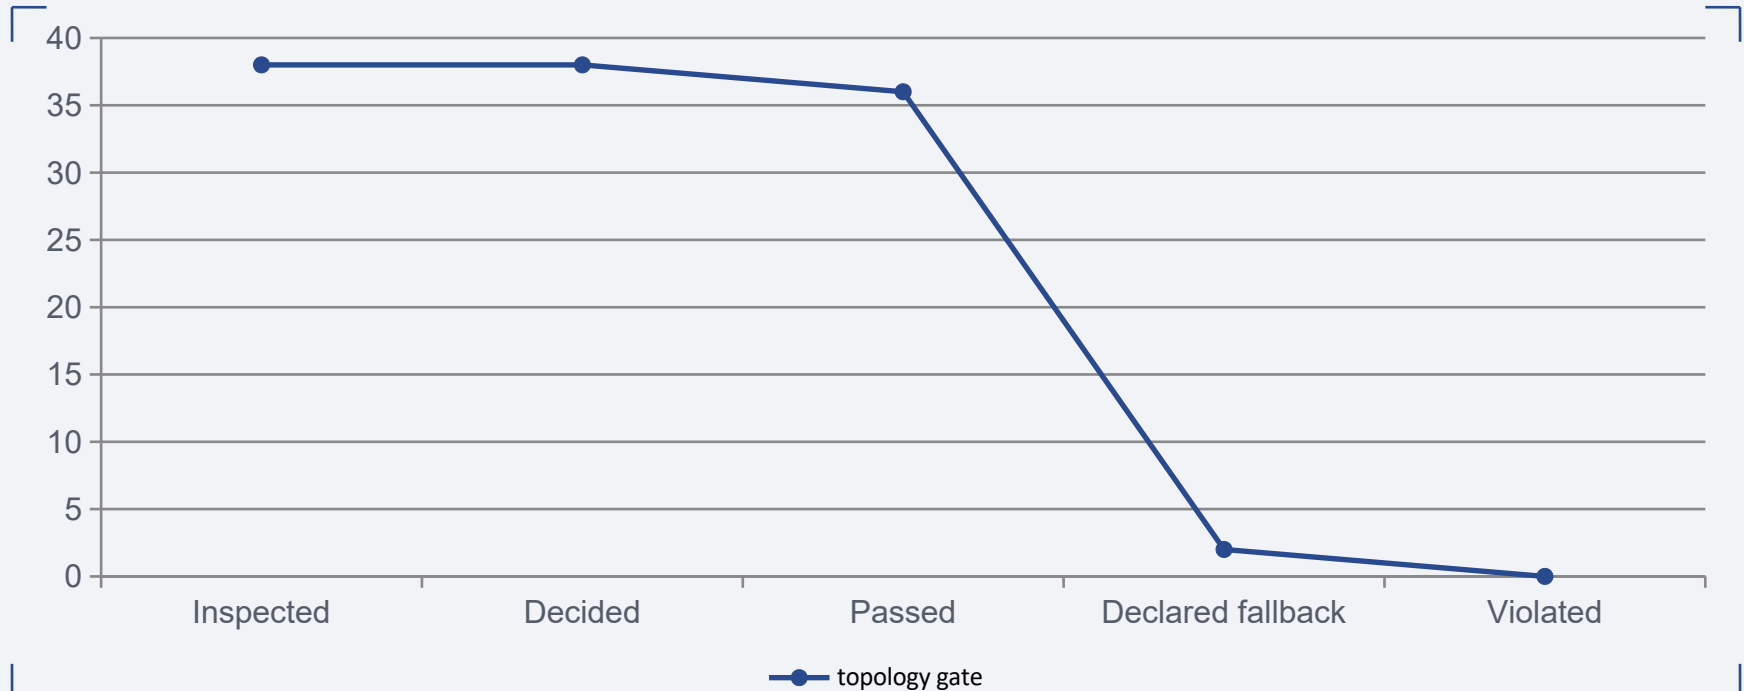

Six artifact kinds are visible to a shallow reader, ten to a deep one

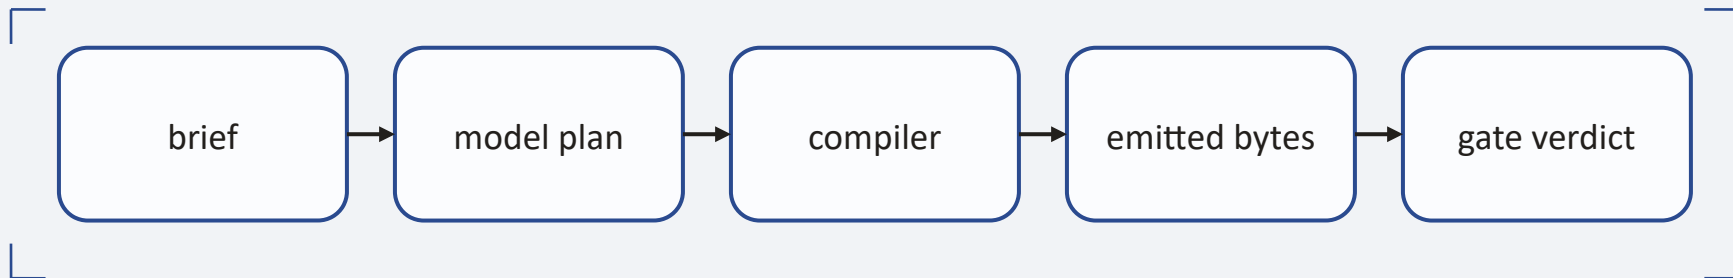

Zero native chart parts became ten

The gate decides every slide, or says it could not

The model's authority ends at the plan

Portability is recorded per artifact kind, and measured twice

Cohort	beforeRoundTrip	afterRoundTrip
chart parts	10	10
data series	18	18
connector bindings	38	38
equation runs	10	10
workbook links	10	0

The equation is a real object, and it took a wrapper to make it travel

Eighty-two of eighty-four candidates cleared every gate

Series	Requested	Passed gates	Eligible	Human-preferred
claude-sonnet-5	24	24	24	0
moonshotai/kimi-k3	24	24	23	0
google/gemma-4-26b	24	24	23	0
deterministic baseline	12	12	12	0

Maturity is derived from receipts, never written beside them

Maturity is derived from the 84 projected arena receipts

One gate is open, and no amount of compute can close it

Certified requires a human blind preference. `humanPreferred` is null on all 84 receipts, so the ladder stops at proven and says so on the surface.
